

FOR IMMEDIATE RELEASE

Mu Dynamics Named a Finalist for Test and Measurement World “Best in Test” Awards

Mu Studio Recognized for Excellence and Innovation in Network Testing

SUNNYVALE, CA, January 18, 2012 - Mu Dynamics, Inc. (www.mudynamics.com), the leader in validating and testing applications and application-aware networks, announced today that the editors of Test & Measurement World have named Mu Studio a finalist for its “Best in Test” Awards in the “Optical and Network Testers” category. Winners will be announced on January 31st during a ceremony at DesignCon 2012.

Mu Studio is the first and only testing solution capable of using real application traffic to quickly determine how users and devices impact all types of networks, including LTE. For service providers and network equipment manufacturers (NEMs) focused on delivering a superior customer experience, Mu Studio provides unique insight into how applications impact networks from a performance and security standpoint. Specifically, Mu Studio offers a suite of solutions to ensure that the intelligent, application-aware network infrastructure is working as advertised, including application detection, application control, scalability, performance and security. The 2012 “Best in Test Product Awards” recognize innovations released between November 1, 2010 and September 30, 2011 that have made significant contributions to the test industry worldwide. Each year finalists are selected from among the nominees by Test & Measurement World’s editors, after which Test & Measurement World’s engineering audience are invited to vote for the category winners using an online ballot. Test & Measurement World then uses a combination of these audience votes and balloting by its editorial staff to determine the “Best in Test and Test of Time” winners.

“Being named among the nominees for the Best Optical and Network Testers category for our Mu Studio performance and security solutions highlights the need network operators and their vendors have for testing using real application traffic,” said Dave Kresse, CEO at Mu Dynamics. “Only Mu Studio can quickly and accurately recreate all the applications and security threats in a unique network, enabling Mu customers to validate that their network and underlying infrastructure will perform in accordance with the service level agreements (SLAs) they have.”

“Since 1991 we have honored unique, innovative new products and services that meet critical market demands, as well as outstanding industry professionals in the electronics test and measurement industry,” said Patrick Mannion, director of content, Test & Measurement World. “We have reviewed many outstanding products and congratulate Mu Dynamics on their achievements.”

About Mu Dynamics, Inc.

Mu Dynamics is the leading provider of solutions ensuring the performance and security of both applications and network infrastructure. The company's innovative solutions enable customers to confidently meet the challenges posed by today's rapidly changing networks. This includes the ever-growing number of applications and devices on the network, and the swift transition to mobile, virtual and cloud environments. Hundreds of service providers, enterprises, application developers and network equipment manufacturers count on its purpose-built solutions, like Mu Studio and Blitz, to ensure their applications and networks are scalable and secure. Mu Dynamics is headquartered in Sunnyvale, California.
